A LEGACY of Scholars

A CONTINUUM of Mentoring: A LEGACY of Scholars

Letter from Executive Leadership

A continuum of mentoring leads to a legacy of scholars. Leadership Alliance scholars are the legacy of dedicated partners who successfully mentor students throughout their academic and career pathways. These students become the mentors of tomorrow, who, in turn, will guide the next generation. This continuum crosses disciplinary and generational boundaries, and as a consequence, strengthens the legacy.

This was evident at the 20th Anniversary of The Leadership Alliance National Symposium (LANS) held in Stamford, Conn., in July. The symposium — where career paths are discussed, opportunities introduced and long-lasting professional and personal relationships begin — demonstrates that the continuum is thriving.

To add momentum to our mission, the Leadership Alliance established an Alumni Association! With a Founding Board in place, we will continue to develop leaders and role models to carry out the Alliance’s shared vision of preparing a workforce that reflects the demographic composition of our diverse nation.

Building on our mentoring activities, we created FYRE, the First Year Research Experience. This program ignited a new way of engaging faculty and coordinators from partner institutions to identify and expose our budding scholars to research early in their academic careers, while contributing to the development of faculty collaborations.

Alliance faculty and administrators who serve as mentors, role models and advisors are a critical component of our mentoring continuum. This spring, the participation of faculty in a one-day workshop helped to shape program activities of the Leadership Alliance Mellon Initiative that provide summer research opportunities in the humanities and social sciences.

Aligned with our commitment to discovering potential and cultivating talent, Heritage University was welcomed into the Alliance community as its newest member. A small liberal arts college in Toppenish, Washington, Heritage University shares the Alliance vision of deep mentoring on the part of its faculty.

Throughout this report are quotes from the Alliance community that highlight their mentoring experiences. These voices strongly articulate how the Continuum of Mentoring is leading us to A Legacy of Scholars.
LANS 2015 —Celebrating Two Decades of Growth

The Leadership Alliance National Symposium (LANS) turned 20 this year! The inaugural symposium was held in 1995 at the National Academy of Sciences, in Washington D.C. and brought together approximately 350 participants. In July 2015, we assembled nearly 600 scholars, of whom more than 400 were undergraduates, post-baccalaureate scholars, and graduate students, representing nearly 200 institutions from across the country and abroad.

LANS, the culminating event of the Summer Research Early Identification Program (SR-EIP), is a crucial step on the pathway to success for students who are just beginning to consider their future in academia, research or industry. It is also a crucial element in the continuum of mentoring cultivated by the Leadership Alliance. For the past two decades, this conference has provided a supportive training ground for students to hone their communication skills and establish a dynamic professional network. They learn about innovative career paths from alumni with advanced degrees, faculty and administrators. The ripple effects of this one conference continue to be manifested in the lives and careers of the students who have participated.

56% Percentage of undergraduates at LANS who were first-time conference participants

81% Percentage of students who gave oral presentations at LANS
“It is powerful to get mentorship on so many different levels, especially someone at the same level. I’ve created powerful ties to other researchers and continue to talk with them long after the summer experience is over. Both fellow participants and my post-doctoral mentor continue to help me with career development. Mentoring is not a one-time opportunity. It’s something that keeps growing with time.”

Diana Aponte-Colón, Undergraduate, University of Puerto Rico, Río Piedras

“When I first came to the Leadership Alliance, I had no laboratory experience. After the first summer, my mentors in the program connected me with faculty near my home institution. I’ve learned from them how to approach a problem, how to ask good questions and how to think critically about situations. This training is relevant not only in science but in life more generally.”

Philip Stephens, Undergraduate, Morehouse College

“This summer I participated at LANS. I have done it twice, as an undergrad and now on the other side as a graduate student. It was really nice to talk to students about grad school and about postbac which I did at the University of Pennsylvania two years ago. At LANS, we get a lot of workshops on mentoring and networking, where to find resources, how to connect with people, and those are skills that I still use today. They have been really useful.”

Jesus Ayala Figueroa, Graduate Student, University of Puerto Rico School of Public Health
Leadership Alliance Alumni & Faculty Mentor the Next Generation of Scholars

“Coming from Compton, California, I had no idea that Brown was an Ivy League school; everything I experienced there was an eye-opener. It is my responsibility and my passion to come back to LANS as a mentor to other students and inspire them to achieve their goals. I want to share my story and let them know that graduate school is tough, but doable. We need to start early planting the seed of interest for others.”

Teresa Ramirez, PhD, Postdoc Fellow (IRTA), National Institute on Alcohol Abuse & Alcoholism, NIH, 2002 SR-EIP Alumna, Brown University

“I came from a small historically black university, and I still remember my impression of Cornell with its 13 libraries. I was mesmerized by the resources available. I met with my mentor every week. She introduced me to her graduate students and other faculty of color, suggested books for me to read over the summer, and gave me feedback on my writing. I can still email her today and she’ll respond within 24 hours.”

Evelyn M. Simien, PhD, Associate Professor of Political Science & Africana Studies, University of Connecticut, 1995 SR-EIP Alumna, Cornell University

With an increasing cadre of alumni progressing along the academic pathway, those who have moved to the next level provide mentoring to those who are coming up behind them.
Alliance undergraduates are mentored by graduate students who, in turn, are mentored by the Doctoral Scholars, who are mentored by a rich network of Alliance professionals.

“Mentoring means different things to different people. For me, it’s about transferring knowledge to my mentees so they can take those skills and do something useful in the world. It’s wonderful when I run into people I’ve trained who are now my academic colleagues.”

Mark Hernandez, PhD, Professor of Environmental & Architectural Engineering, University of Colorado Boulder

“Mentoring is about having an interest in the person and trying to understand where they are coming from and what they need. I try to provide whatever is going to be most valuable to them – whether it’s networking opportunities, feedback on their work, practical information, or pathways to emotional support.”

Ana Carneiro, PhD, Assistant Professor of Pharmacology, Vanderbilt University
Leadership Alliance Launches Alumni Association & Founding Board

Since 1993, the continual mentorship of students who participated in the SR-EIP has contributed to the production of 990 scholars who have obtained advanced degrees.

We maintain the involvement of our alumni by bringing them back to LANS, where they serve as role models for undergraduates and peer mentors to each other. In turn, our vast network of faculty, administrators and partners offer a professional network to mentor our advanced degree alumni. Together, this community of scholars and professionals sustain the continuum of mentoring that distinguishes the Leadership Alliance from all other academic enrichment programs.

In an effort to maintain this community in a more structured way, a culmination of meetings and conference calls with Alliance alumni resulted in the creation of the Leadership Alliance Alumni Association and Founding Board. The Association is designed to cultivate a lifelong relationship between the Leadership Alliance and its alumni, impact mentoring on a national and global scale, and create a community of scholars with invaluable resources for current and future Alliance participants.

Alumni Association Founding Board

President: Marcus Jones, PhD, Senior Research Scientist, Human Longevity, Inc.
Vice-President: Chinonye Nnakwe, PhD, AAAS Science & Technology Policy Fellow
Secretary: Eric N. Villegas, PhD, Research Microbiologist, United States Environmental Protection Agency
Treasurer: David A. Stout, PhD, Assistant Professor of Mechanical & Aerospace Engineering, California State University, Long Beach
Communications Officer: Shanta Whitaker, PhD, MPH, Health Policy Consultant, LMI

“I recently hired a former SREIP student as a scientist. I’m trying to help others leverage the network that the Leadership Alliance has built. We are often trying to climb the ladder by ourselves, but it is important to pull everyone else up. Being prepared and sharing that preparation with others can build a better system.”

Marcus Jones, PhD, Senior Research Scientist, Human Longevity, Inc.,
President, Leadership Alliance Alumni Association Founding Board
Of the 990 alumni with advanced degrees, 719 have completed PhD, MD-PhD and other professional degrees and 271 have completed Master’s degrees. Another 665 students are pursuing graduate and professional training, assuring an ever-increasing pool of talent for tomorrow’s workforce. Many alumni have returned to academia to serve as mentors and role models for the next generation.
Profile of 2015 Summer Research Early Identification Program Participants

Each year, the Leadership Alliance Summer Research Early Identification Program (SR-EIP) engages nearly 300 undergraduates in research experiences spanning all academic disciplines.

274 Participants
60% Female
45% Hispanic

SR-EIP Demographics
- Black: 35%
- White: 26%
- Multi-race: 12%
- Asian: 7%
- Native Am/Pacifc Is: 3%
- Other: 17%

SR-EIP Student Disciplines
- Biological Sciences: 54%
- Humanities & Social Sciences: 22%
- Math, Comp Sci & Engineering: 12%
- Psychology: 7%
- Physical Sciences: 5%

Undergraduate Class
- Rising Seniors: 55%
- Rising Juniors: 31%
- Rising Sophomores: 14%
While the majority of our SR-EIP students have been juniors and seniors, the Leadership Alliance believes that the future of the workforce depends upon young, diverse talent who are intellectually enriched with research experiences starting in their freshman year of college.

Committed to this belief, we ignited FYRE: First Year Research Experience program. This initiative is designed to recruit first year students from Alliance minority-serving institutions (MSIs) and place them in a supportive research environment through a process that involves faculty and Alliance institutional representatives at both the MSI and SR-EIP research site.

“It is of utmost importance to cultivate the thirst for knowledge in young minds. It takes time to properly mentor students and one has to understand that a ‘one-size fits all’ cannot be applied; each student is different and requires a personalized approach.”

Maria Hadjifrangiskou, PhD, Assistant Professor of Pathology, Microbiology & Immunology
Vanderbilt University School of Medicine

“As a freshman, it was a phenomenal experience, not only at the conference but also at Vanderbilt University doing research. I am thankful for the opportunity for rising sophomores to do research.”

Logan Northcutt, Undergraduate at Morehouse College
Leadership Alliance Mellon Initiative

We are transforming the academy through our Leadership Alliance Mellon Initiative (LAMI). This program mentors and trains students to prepare them for competitive doctoral-level training programs and careers in the humanities and social sciences. The successful submission of a competitive renewal application to the Andrew W. Mellon Foundation allowed us to expand recruitment efforts to fellows from the Mellon Mays Undergraduate Fellowship program within the United Negro College Fund (UNCF) consortium.

In 2015, LAMI students conducted research at the following institutions: Brown, Columbia, Harvard, New York, Princeton, Stanford, Yale University, University of Chicago, University of Pennsylvania, University of South Florida and University of Virginia.

Community-building opportunities were created for LAMI cohorts during a visit to the University of Pennsylvania. LAMI participants had an opportunity to meet peers from other LAMI research sites, graduate students and faculty.

We also organized a LAMI Faculty Retreat at Dartmouth College in April 2015, to provide an opportunity for humanities and social sciences faculty from a diverse spectrum of Alliance and UNCF/Mellon institutions to network, share best practices and contribute to program development. Discussions shed light on student preparation, research project articulation and mentoring, and creating a research identity and community. The retreat resulted in tangible deliverables for incorporation into the LAMI curriculum.

“It challenged me to push my research further than I had ever imagined. It’s not competition, but a healthy motivation to live up to the incredible work of my peers.”

LAMI 2015 Participant

“Being able to network with future colleagues in my chosen field and share research interests and techniques was helpful in shaping my future work.”

LAMI 2015 Participant
Heritage University

SPOTLIGHT on Heritage University

Newest Institutional Member of the Leadership Alliance

Heritage University enriches the Alliance membership with its commitment to mentoring a diverse student and faculty body of Native American and Latino populations. Located in the Yakima Valley of south central Washington State, Heritage has a student body of approximately 1,100. Read on for excerpts from Heritage’s story about freshman Felipe Anguiano’s participation in the Leadership Alliance’s FYRE: First Year Research Experience program.

Leadership Alliance Affiliation Adds Rare Opportunity for Heritage Students

When Science major Felipe Anguiano registered for his freshman semester of college last fall, little did he know that his path at Heritage University might soon take a sharp left — 2,000 miles east — toward Chicago. His summer research experience provided a hands-on learning experience with leading biology researcher Dr. Jonathan Staley at the University of Chicago’s Staley Lab.

For Felipe and other promising Heritage students yet to come, the Leadership Alliance represents one thing: an invaluable “real life” educational opportunity early in their academic careers. “It’s for students who ultimately want to do research, be part of think tanks, who want to teach,” said Winona Wynn, PhD, Humanities professor and The Leadership Alliance institutional coordinator for Heritage. “Suddenly, beyond our corner of the world, a world of really meaningful, practical opportunity is opened up for the Heritage students who seriously want to go places — both figuratively and literally,” said Wynn. “My message to them was that whatever you’re naturally curious about — anything — there’s research being done on it somewhere out there.”

Wynn’s message clicked with Felipe Anguiano. “I think every day about what makes the world tick,” said Anguiano. “I came to Heritage because I want to do something with my life that helps people. I want to make a scientific discovery that will change people’s lives for the better.” Michael Parra, PhD and Felipe’s biology professor and Paula Collucci, M.A., his English instructor, both identified Felipe as an excellent candidate for a Leadership Alliance internship. Wynn identified the University of Chicago Staley Lab internship as the perfect opportunity for Felipe. Felipe wrote a 1000-word letter about his goals, how the internship would move him toward those goals and how he will be an asset to Dr. Staley’s work. “If I get it, I’ll be working with genetics and cellular machinery, studying DNA and protein and the fundamental steps of gene expression,” said Felipe.

For future students who seize this opportunity, says Wynn, they will see the endless potential for their future. “And to the larger world, they will be recognized as someone who is engaged in meaningful activity outside the classroom.” For Heritage, says President Bassett: “It sets us apart in yet another way. It’s like being in the right athletic conference — it will help us attract other ambitious students who are excited to learn. “More and more, we are able to give many of the same opportunities to our students as other leading universities.”
Funding for Alliance programs is provided through institutional resources and membership fees, grant awards from federal agencies and private foundations, private gifts and conference fees. Expenditures focus predominantly on programming for undergraduates and continued professional development and networking for graduate student and Doctoral Scholar alumni, partnership development, evaluation and operations.

This year, we launched a new fundraising campaign to solicit donations to help sustain Alliance programs and initiatives.
I am very proud of the fact that I can have a positive impact on students’ skill set, their self-efficacy and self-identification as a scientist.
